A new hybrid polypeptide with enhanced pharmacokinetic properties comprises enhancer sequence

Disclosure; Page 45; 124pp; English.

The invention relates to hybrid polypeptides comprising enhancer peptide sequence linked to core polypeptides. The enhancer polypeptides are derived from various retroviral envelope (1941) protein sequences, especially from HIV-1. HIV-2 and SIV. The enhancer peptides enhance the pharmacokinetic properties such as increasing the half-life of any core polypeptide that they are linked to. The core polypeptides are any polypeptide that may be introduced into a living system and that can function as a pharmacoligically useful peptide for the treatment or prevention of a disease. The core polypeptides are bloactive peptides selected from a growth factor, cytokine, differentiation factor, interferon, colony stimulating factor, hormone or angiogenic

Pred. No. 4.2e-25;

```
The invention relates to hybrid polypeptides comprising enhancer peptide sequence linked to core polypeptides. The enhancer polypeptides are derived from various retroviral envelope (gp41) protein sequences, pepcially from HIV-1, HIV-2 and SIV. The enhancer peptides enhance the pharmacokinetic properties such as increasing the half-life of any core polypeptide that they are linked to. The core polypeptides are any polypeptide that may be introduced into a living system and that can function as a pharmacoligically useful peptide for the treatment or prevention of a disease. The core polypeptides are bioactive peptides selected from a growth factor, cytokine, differentiation factor. Interferon, colony stimulating factor, hormone or angiogenic factor. The peptides of the invention can be used for inhibiting viral infection and can be used in anti-viral and anti-fusegenic treatments.
factor. The peptides of the invention can be used for inhibiting viral infection and can be used in anti-viral and anti-fusogenic treatments. Sequences AAY88651-Y90655 represent core polypeptide fragments that can be used in the invention. Some sequences among those indicated also comprise enhancer fragments at terminal ends and form hybrid polypeptides
                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             be used in the invention. Some sequences among those indicated also comprise enhancer fragments at terminal ends and form hybrid polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Retrovirus; hybrid polypeptide; enhancer; gp41; envelope protein; HIV-1; HIV-2; SIV; pharmacokinetic; half-life; growth factor; cytokine; viral; anti-fusogenic; differentiation factor; interleukin; interferon; colony stimulating factor; hormone; angiogenic factor.

The enhancer peptide sequence increases the half-life and reduces the clearance rate of therapeutic peptides, which increases their efficacy and minimises the incidence and severity of adverse side effects. In addition, this increases the sensitivity of the diagnostic procedure in which they are used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a core polypeptide which may be linked to an enhancer peptide to form a novel hybrid polypeptide. The hybrid to properties relative to those exhibits enhanced pharmacokinetic properties relative to those exhibited by the core polypeptide when introduced into a living system. It is used to increase the in vitro or ex vivo half-life of the core polypeptide and core polypeptides can be used for modulating fusogenic events and intracellular processes involving coil peptide interactions. Other uses include preventing, treating and/or diagnosing disorders involving fusion events (e.g. modulation of neurotransmitter exchanges and sperm-egg fusion), intracellular processes involving coiled-coil peptides (e.g. bacterial infections) and viral infections that involve cell-cell and/or virus-cell fusion (e.g. viral)
                                                                                                                                                                                                                                                                                                                        Core polypeptide; enhancer; antiviral; anti-HIV; virucide; hepatotropic; antiinflammatory; hybrid polypeptide; coiled-coil peptide interaction; fusion-related disorder; bacterial infection; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        infections caused by human immunodeficiency virus, respiratory syncytial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New hybrid polypeptide, useful for preventing, treating and diagnosing e.g. viral infections, comprises an enhancer peptide linked to a core polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

HIV viral envelope protein stabilising peptide #4.

14-FEB-2002 (first entry)

AAU70182;

```
Core polypeptide, enhancer, antiviral, anti-HIV, virucide, hepatotropic, antiinflammatory; hybrid polypeptide, coiled-coil peptide interaction, fusion-related disorder, bacterial infection, viral infection.
                                                                                                                                                                                                                                                                             New hybrid polypeptide, useful for preventing, treating and diagnosing e.g. viral infections, comprises an enhancer peptide linked to a core polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 36;

The present sequence is a core polypeptide which may be linked to an enhancer peptide to form a novel hybrid polypeptide. The hybrid polypeptide exhibits enhanced pharmacokinnetic properties relative to those exhibited by the core polypertide when introduced into a living system. It is used to increase the in vitro or ex vivo half-life of the core polypeptide or the hybrid and core polypeptide or be used for modulating fusogenic events and intracellular processes involving coiledcoil peptide interactions. Other uses include preventing, treating and/or diagnosing disorders involving fusion events (e.g. modulation of neurotransmitter exchange and sperm-egg fusion, intracellular processes involving coiled-coil peptides (e.g. bacterial infections) and viral infections that involve cell-cell and/or virus-cell fusion (e.g. viral).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            infections caused by human immunodeficiency virus, respiratory syncytial virus, Epstein-Barr virus, hepatitis B virus, Mason-Pfizer virus and polio virus). The enhancer peptide sequence increases the half-life and reduces the clearance rate of therapeutic peptides, which increases their efficacy and minimises the incidence and severity of adverse side effects. In addition, this increases the sensitivity of the diagnostic

The invention relates to isolated analogues of the heptad repeat region peptides DP178 and DP107. DP178 and DP107 correspond to amino acids 638-637 (heptad repeat region HR2) and 558-555 (heptad repeat region HR1) respectively, of HIV-ILM1 transmembrane protein gp41. The HR1 and HR2 regions of proteins interact non-covalently with each other and/or with peptides derived from them. This interaction is required for normal infectivity of viruses such as RSV and HIV. The heptad repeat region peptide analogues may be used to inhibit respiratory syncytial virus (RSV) infection in a cell. They may also be used to inhibit HIV infection. The present sequence is a peptide provided in the specification. (Updated on 06-bUG-2003 to correct OS field.) (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                           Heptad repeat region peptide analogs useful for inhibiting virus/cells fusion, useful for treating HIV and Respiratory Syncytial Virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human immunodeficiency virus, HIV; respiratory syncytial virus; RSV;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated analogues of the heptad repeat region peptides DP178 and DP107. DP178 and DP107 correspond to amino acids 638-673 (heptad repeat region HR2) and 558-555 (heptad repeat region HR1) respectively, of HIV-ILAI transmembrane protein 9941. The HR1 and HR2 regions of proteins interact non-covalently with each other and/or with peptides derived from them. This interaction is required for normal infectivity of viruses such as RSV and HIV. The heptad repeat region peptide analogues may be used to inhibit respiratory syncytial virus (RSV) infection in a cell. They may also be used to inhibit HIV septentication. The present sequence is a peptide provided in the specification. (Updated on 06-NUG-2003 to correct OS field.) (Updated on 11-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                               The invention relates to isolated analogues of the heptad repeat region peptides DP178 and DP107. DP178 and DP107 correspond to amino acids 638-673 (heptad repeat region HR2) and 558-555 (heptad repeat region HR1) respectively, of HIV-ILM1 transmembrane protein gp41. The HR1 and HR2 regions of proteins interact non-covalently with each other and/or with peptides darived from them. This interaction is required for normal infectivity of viruses such as RSV and HIV. The heptad repeat region peptide analogues may be used to inhibit respiratory syncytial virus (RSV) infection in a cell. They may also be used to inhibit HIV infection. The present sequence is a peptide provided in the specification. (Updated on 06-AUG-2003 to correct OS field.) (Updated on 11-SEP-2003 to standardise OS field)
                                                                               Heptad repeat region peptide analogs useful for inhibiting virus/cells fusion, useful for treating HIV and Respiratory Syncytial Virus
                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Anti-retroviral; DP178-like; DP107-like; transmembrane protein gp41; antifusogenic; antiviral; HIV transmission; mutant; mutein.

The present invention relates to peptides which exhibit anti-retroviral activity. The peptides of the invention (AAU12559-AAU14009) comprise DP178-like and DP107-like peptides. The DP178 peptide corresponds to amino acids 639-673 of the transmembrane protein gp41 from human immunodeficiency virus I (HIV-1) isolate LAI. The DP107 peptide corresponds to amino acids 558-595 of gp41 from HIV-1LAI. The invention also relates to a method of identifying compounds that inhibit the formation of or disrupts a DP107/DP178 complex, both in the presence or absence of a test compound, in a reaction mixture containing DP107 and DP107 peptides. The method is useful for identifying compounds, including small molecule compounds, which may themselves exhibit antifusogenic, antiviral or intracellular modulatory activity. The DP178-like/DP107-like peptides are useful to inhibit human and non-human retroviral.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 particularly HIV, transmission to uninfected cells. The present sequence represents one of the DP178-like/DP107-like peptides of the invention
Identifying a compound that inhibits the formation of or disrupts a DP107/DP178 complex, especially compounds with antifusogenic, antiviral or intracellular modulatory activity, by detecting the formation of a DP107/DP178 complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying a compound that inhibits the formation of or disrupts a DP107/DP178 complex, especially compounds with antifusogenic, antiviral or intracellular modulatory activity, by detecting the formation of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to peptides which exhibit anti-retroviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Anti-retroviral; DP178-like; DP107-like; transmembrane protein gp41;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Merutka G;

The present invention relates to a method of treating an HIV infection in an individual, which involves administering in combination a chemokine co-receptor 5 (CCRE) antagonist or its salt and a DP-178 polypeptide or its derivative. Other viral infections can also be treated using the method. The present sequence is a peptide derived from HIV and useful in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Treatment of HIV infection in an individual involves administration of a combination of chemokine co-receptor five antagonist and a specified HIV envelope polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Viral infection; HIV; antiviral; DP-178; CCR5 antagonist; T-20; DP-107;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method of treating an HIV infection in an individual, which involves administering in combination a chemokine co-receptor 5 (CCR5) antagonist or its salt and a DP-178 polypeptide or its derivative. Other viral infections can also be treated using the method. The present sequence is a peptide derived from HIV and useful in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Treatment of HIV infection in an individual involves administration of a combination of chemokine co-receptor five antagonist and a specified HIV envelope polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Viral infection; HIV; antiviral; DP-178; CCR5 antagonist; T-20; DP-107;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ð
                                                                                                                                                                                                                                                                   The invention relates to a novel hybrid polypeptide comprising an enhancer peptide sequence linked to a core polypeptide. The enhancer peptide sequence comprises WQRWEQKI or WASIWEWF. The invention also includes novel peptides that exhibit anti-fusogenic activity, antiviral activity and/or ability to modulate intracellular processes. The novel bybrid polypeptide has virucide and antidiabetic activity. The enhancer peptide sequence enhances pharmacokinetic properties of any core polypeptide, for example, a polypeptide useful for the treatment or prevention of a disease, or an imaging agent useful for imaging tructures in vivo. The core polypeptide and hybrid polypeptides are useful for modulating fusogenic events and exhibit antifusogenic or antiviral activity. The novel hybrid polypeptide is useful for decreasing viral infection and modulating intracellular processes involving coiled-coil peptide interactions. The novel hybrid polypeptide is useful for antiorating the symptoms of forms of diabetes. The novel hybrid polypeptide is also or iseful as a part of prognosis for preventing disorders including fusion events and viral infection that involves cell-cell and/or virus-cell tusion, and for diagnosis and in vivo imaging methods. This sequence

The invention relates to a novel hybrid polypeptide comprising an enhancer peptide sequence linked to a core polypeptide. The enhancer peptide sequence comprises WGEWERN The invention also includes novel peptides that exhibit anti-fusogenic activity, antiviral activity and/or ability to modulate intracellular processes. The novel whyrid polypeptide has virucide and antidiabetic activity. The enhancer peptide sequence enhances pharmacokinetic properties of any core polypeptide, for example, a polypeptide useful for the treatment or pervention of a disease, or an imaging agent useful for imaging structures in vivo. The core polypeptides and hybrid polypeptides are useful for modulating tusogenic events and exhibit antifusogenic or structures in vivo. The novel hybrid polypeptide is useful for decressing viral infection and modulating intracellular processes involving coiledcoil peptide interactions. The novel hybrid polypeptide comprises insular coil peptide interactions. The novel hybrid polypeptide comprises insular coil peptide interactions in the novel hybrid polypeptide comprises insular coil peptide forms of diabetes. The novel hybrid polypeptide is also or its fragment, so the core polypeptide is useful for ameliorating the symptoms of forms of diabetes. The novel hybrid dolypeptide is also or its fragment forms of diabetes. The novel hybrid dolypeptide is also events and viral infection that involves cell-cell and/or virus-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New hybrid polypeptide for modulating fusogenic events for e.g. antiviral activity, has enhancer peptide sequence derived from retroviral envelope protein sequences linked to core polypeptide e.g. therapeutic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pharmaceutical, human immunodeficiency virus, HIV, gp41, glycoprotein41;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fusion, and for diagnosis and in vivo imaging methods. This sequence represents an enhancer peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide #36 used in the pharmaceutical composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

```

```
The present invention relates to a pharmaceutical composition comprised of polymer admixed with synthetic peptides derived from human immunodeficiency virus (HIV) gp41. The invention is useful in treating HIV infection (preferrably HIV-1) and act as as antiviral agent. The present sequence is a peptide used in the pharmaceutical composition of the invention
                                                                                                                                                                                              Pharmaceutical composition used to treat Human Immunodeficiency Virus comprises solution comprising synthetic peptide (Human Immunodeficiency Virus fusion inhibitor) in mixture with polyol.
                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 40; 36pp; English.

env polyprotein P - human immunodeficiency virus type 1 (fragment)

NyAlternate names: cost polyprotein

NyContains: amino end of cost protein gp41; carboxyl end of cost protein gp120

C;Species: human immunodeficiency virus type 1, HIV-1

A;NOTE: host Homo sapiens (man)

C;Date: 11-Feb-1993 #sequence_revision 31-Dec-1993 #text_change 09-Jul-2004

C;Accession: C41621
                                                                                                                                          Gaps

VCLJH3

env protein precursor - human immunodeficiency virus type 1 (isolate HTLV-III, BH10)
NiAlternate names: coat polyprotein
NiAlternate names: coat polyprotein
C;Species: human immunodeficiency virus type 1, HIV-1
A;Note: host thome sapiens (man)
C;Date: 17-May-1985 #sequence_revision 17-May-1985 #text_change 09-Jul-2004
C;Accession: A03973
R;Ratner, L.; Haseltine, W.; Patarca, R.; Livak, K.J.; Starcich, B.; Josephs, S.F.; Dora nberger, J.A.; Papas, T.S.; Ghrayeb, J.; Chang, N.T.; Gallo, R.C.; Wong-Staal, F.
Nature 113, 277-284, 1985
A;Title: Complete nucleotide sequence of the AIDS virus, HTLV-III.
A;Reference number: A93353; MUID:85111123; PMID:2578615
A;Accession: A03973
A;Accession: A03973
A;Residues: 1-856 cRAT-

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
